1.3.3	Network Capital Contributions (NCC)					
Nota/Note	<p>A once-off contribution for the electricity capacity requested for new developments and consumer upgrades (existing serviced erven where requested capacity is greater than the original designed or installed capacity) also applicable to scheme amendments, subdivision or consent use. The after-diversified maximum demand (ADMD) for each erven is used in network designs for township development, scheme amendment and service connection upgrades.</p> <p>(a) The ADMD is determined by the Town-planning Scheme and is as follows:</p> <p>(i) Residential (on which only one or, at the most two, dwelling-units per erf, may be erected), Multiple Residential, Agricultural or Special and Undetermined, for a specific use which, in the opinion of the Manager: Electro-Technical Services is in accordance with Residential.</p> <p>Lifeline 2 kVA ADMD per potential dwelling Low cost housing 3,5 kVA ADMD per potential dwelling Standard residential 5 kVA ADMD per potential dwelling High residential 7 kVA ADMD per potential dwelling Very high residential 9 kVA ADMD per potential dwelling Very high residential Three-phase connections or upgrade of existing single phase connection to three phase. Assume that the ADMD for a three-phase connection is 3 times that of a single-phase connection.</p> <p>(ii) Commercial and all non residential applications ADMD per erf = Notified Maximum Demand (NMD) requested by owner/developer. The NMD's of existing serviced erven are equal to the installed capacity or as per service agreement.</p> <p>(b) Determining charges The NCC charge is finally determined by the actual level at which the development connects to the supply system. The charge is calculated as follows: $C = (D_n - D_e) \times X$ Where C = Network Capital Contribution charge payable in rand D_n = Sum of new ADMDs in kVA D_e = Sum of existing ADMDs in kVA X = Contribution per kVA at connection level as indicated below</p> <p>(c) Contributions The Network Capital Contributions charges must be such as to cover the capital liabilities incurred or to be incurred by the Municipality in supplying the distribution and/or reticulation network to increase the capacity to the premises or group of premises. The contributions per kVA at the different connection levels are as follows:</p>
